

# Coding Challenge Week 5 Day 2

## Star Pattern using Javascript

---

Write a Javascript function `generateStarPattern` that accepts the input of the maximum count of stars that can be printed in a single row which returns a star pattern likes this. (for size = 5) and star pattern = (1, 2, 3, 4, 5, 4, 3, 2, 1)

```
*
**
***
****
*****
****
***
**
*
```

Hint: It deals with 2 loops (start to bottom bottom to start)

Test case 1: `generateStartPattern(3)`

Output : \*

```
  **
  ***
  **
  *
```

Here we have given an input of 3, which means that a single row can have 3 stars at maximum. Star pattern = (1, 2, 3, 2, 1)

**To repeat something use the repeat method**

**For example “hi”.repeat(3) will give you “hihihi”**

I have given you enough hints, take it from here. Good luck :)
