

Assignment Week 5 Day 5

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="UTF-8" />
    <title>Selector Exercise</title>
    <link rel="stylesheet" href="selector-exercise.css" />
  </head>
  <body>
    <h1>I am an h1!</h1>
    <p id="first" class="special">Hello</p>
    <p class="special">Goodbye</p>
    <p>Hi Again</p>
    <p id="last">Goodbye Again</p>

    <button>Click Me</button>
    <p id="eventIndicator">No One Has Clicked Me Yet</p>

    <script type="text/javascript" src="selector-exercise.js"></script>
  </body>
</html>
```

I want you to select the first p tag in at least 4 different ways (think of all the possible CSS selectors)

Then attach a click event listener to the “Click me” button which should alert a text as “I am clicked”.
