

Assignment Week 3 Day 4

You don't have to style anything, just the green rectangles will do the job.

Exercise 1

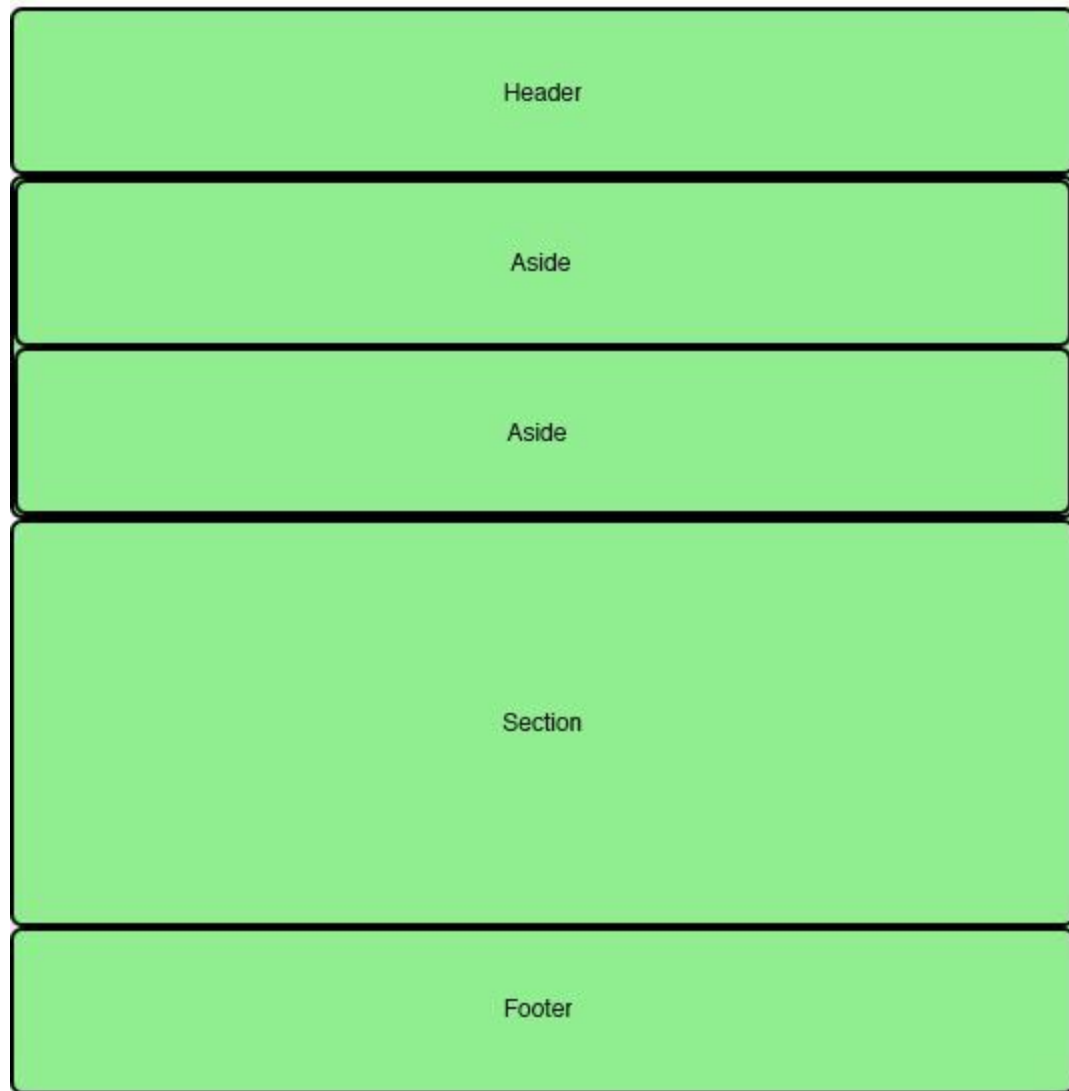

The aim is to create a layout for a large screen similar to that of the following figure.

Now the question to ask is: how will the layout react when I reduce the size of the window? As I used the classes `col-lg-*`, everything will be stacked when under 1200 pixels. If this is the effect I want, then it's perfect. But suppose that on a tablet I want a structure similar to the following figure. (Hint: It deals with displays)

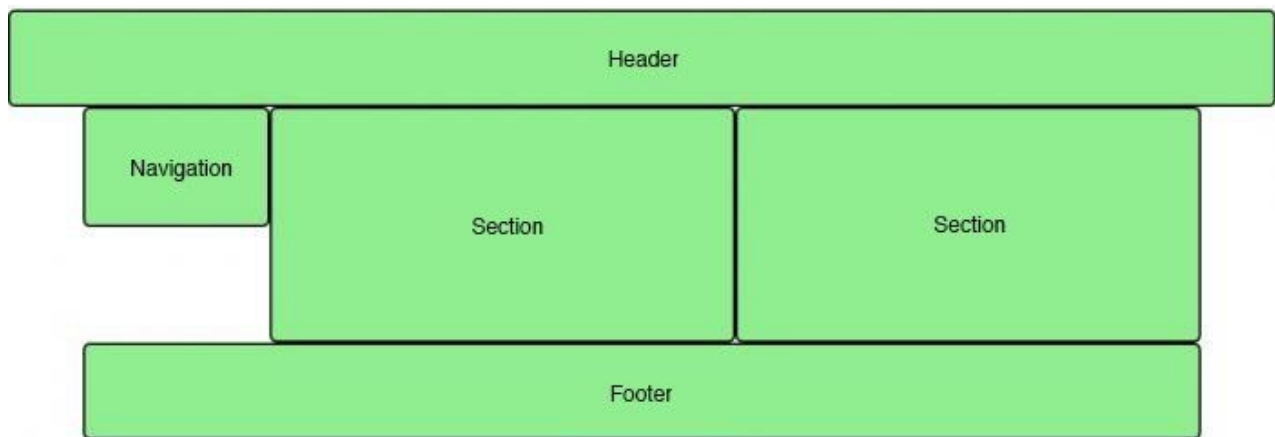

We continue with our exercise by removing 2 `aside` tags for smartphone (see figure below).

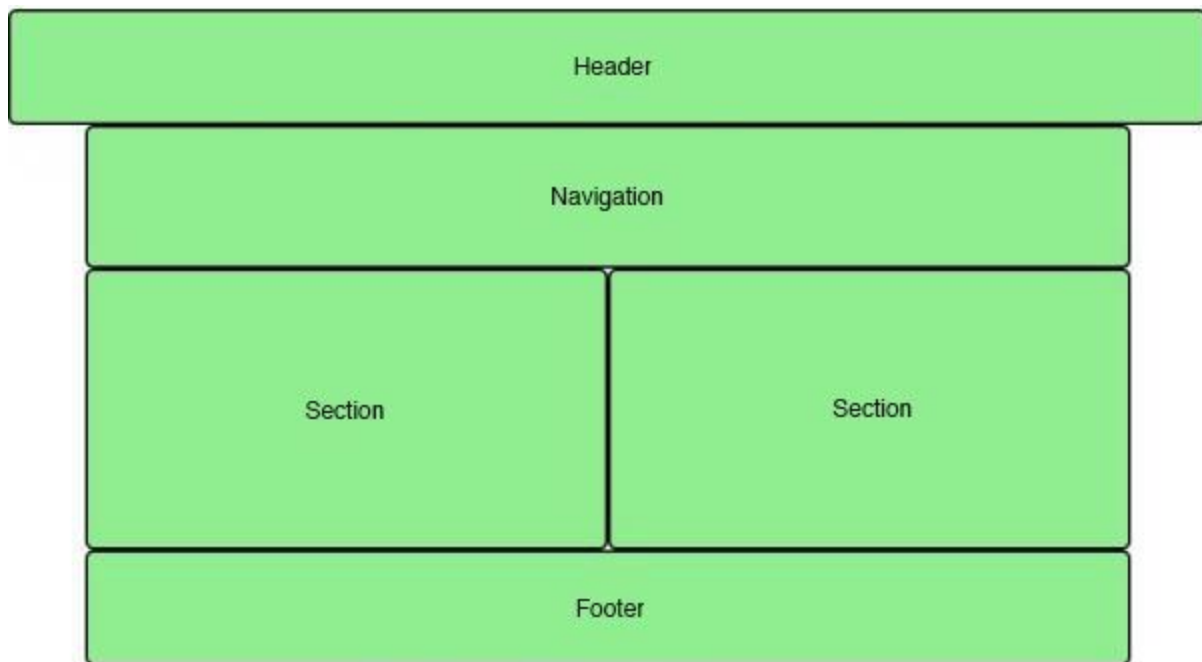

P.T.O

Exercise 2

Now let's look at another case. I want to obtain the result shown in the following figure.

I'd like the two sections to stay side by side for a medium screen, as in the next figure:

Hope this will supercharge your bootstrap grid skills.
