Assignment Week 3 Day 5

The following assignment is a mix of tests between HTML, CSS, SCSS, Bootstrap. Your job is to recreate the design (present inside Week3Day5Assets.zip outside this file in Google drive) for both desktop as well as mobile. Use bootstrap as extensively as possible (like Responsive grid, NavBar, buttons, Modals, Footers, Contact us forms). Try to minimize the creation phase from scratch and take bootstrap's help. The colors and instructions are present inside instructions.md and style-guide.md respectively.

Each section would have a horizontal line with a star in center indicating as a horizontal line. Skip that design component alone, as I felt it would be a bit hard to code in CSS, but feel free to challenge yourself on that.

No need to work on Form validations or any intricate user interaction related styles. Just recreation is enough to just sharpen your design skills. I am sure by the end of this assignment, you will feel much confident about your front end design domain knowledge.

GOOD LUCK :)
