Coding Challenge Week 7 Day 2

Well, this challenge is simple. The goal is to make sure you are able to install NPM packages and use the same with Parcel. The package you would be using for this challenge is "ms" .. Check it out on [NPM](#). Its a small package which converts time in words to milliseconds and vice versa.

Create an input tag accepting time in words and convert to milliseconds. (15 minutes, 10 seconds, 2 hours, 1 day)

Create an input of type number accepting time in milliseconds and convert it into wordings ..

Don't worry, ms has just two methods. Visit the documentation and you will be good to go.
